

## Exercise 1

Survey data from the 2000 American National Election Study. Two sets of six questions with four responses each, asking respondents' opinions of how well various traits (moral, caring, knowledgeable, good leader, dishonest, intelligent) describe presidential candidates Al Gore and George W. Bush. The responses are (1) Extremely well; (2) Quite well; (3) Not too well; (4) Not well at all. Many respondents have varying numbers of missing values on these variables. The data set also includes potential covariates VOTE3, the respondent's 2000 vote choice (when asked); AGE, the respondent's age; EDUC, the respondent's level of education; GENDER, the respondent's gender; and PARTY, the respondent's Democratic-Republican partisan identification.

VOTE3 is coded as (1) Gore; (2) Bush; (3) Other.

EDUC is coded as (1) 8 grades or less; (2) 9-11 grades, no further schooling; (3) High school diploma or equivalency; (4) More than 12 years of schooling, no higher degree; (5) Junior or community college level degree; (6) BA level degrees, no advanced degree; (7) Advanced degree.

GENDER is coded as (1) Male; (2) Female.

PARTY is coded as (1) Strong Democrat; (2) Weak Democrat; (3) Independent-Democrat; (4) Independent-Independent; (5) Independent-Republican; (6) Weak Republican; (7) Strong Republican.

**Scores by Continent**

### scores interpretation

```
##           Continents Scores Averages
## 1           Africa      -11.984971
## 2            Asia       -3.486471
## 3        Australia     -12.277853
## 4 Central America      19.006286
## 5            Europe      13.196160
## 6 North America         2.919687
## 7 South America       -4.288695
```

We notice visible differences between the continents, in particular we notice a sort of clustering between , we could say, average poorer ones and average richer ones. The ANOVA test confirms the result and also looking at the average scores in the last table we see a sort of trend that confirm this thesis. I don't know if the richness factor is the clue one, but it should be something at least related with it.
